

A publication by Forisk Consulting that tracks, screens, and analyzes the wood bioenergy sector in the United States.

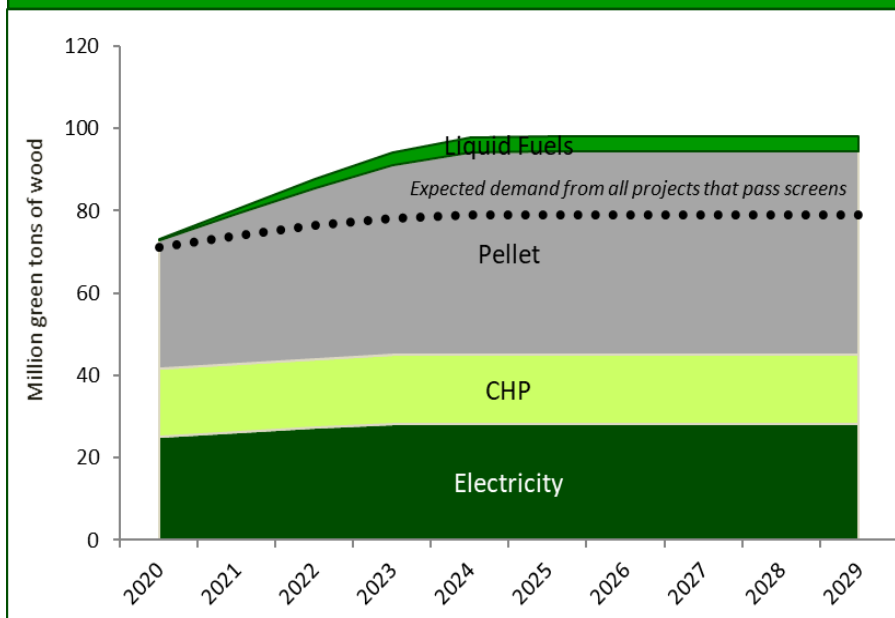

## Free Summary

### Number and Wood Use of Announced and Operating Projects, 2029

Region	Number of Projects by Type						Total	Total that pass screens	Wood Use of All Projects gtons	Wood Use of Projects that Pass Screens gtons
	Electricity	CHP	Thermal	Liquid Fuel	Pellet	Other				
North	42	24	8	13	77	0	164	113	22,988,916	21,426,816
South	23	20	9	18	72	4	146	87	59,137,628	43,735,730
West	35	24	2	5	46	0	112	76	16,915,926	13,823,776
Total	100	68	19	36	195	4	422	276	99,042,470	78,986,321

- **As of April 17, 2020, there were 422 projects in Forisk's Wood Bioenergy US database.** All announced and operating projects could use a total of 99.0 million green tons of wood per year by 2029. Projects that pass viability screens could consume 79.0 million tons of wood per year.
- Of the 146 projects announced and operating in the South, 87 pass viability screens. In the West, 76 of the 112 announced and operating projects pass viability screens. In the North, 113 of the 164 announced and operating wood bioenergy projects pass Forisk's viability screens.
- Regionally, the U.S. North still has the largest share (41%) of viable wood bioenergy projects while the South accounts for 55% of the potential wood use for bioenergy.

### Estimated Wood Use by Announced Facilities

### Notes

- Estimated demand is wood use by all projects that pass the technology and status screens.
- Technology: if the technology is viable today, then the project passes the technology screen. Pelletizing technology and electricity are currently proven technologies that pass this screen. Torrefied biomass technology does not pass the technology screen. Cellulosic ethanol from wood feedstock is still a developing technology and is currently not operational.
- Status: if the project has received/secured/signed two or more of the following then it passes the status screen: financing, air quality permits, Engineering Procurement and Construction contracts, off-take agreements, interconnection agreements for electricity facilities, and supply agreements.
- CHP is combined heat and power, or cogeneration. Thermal volumes are less than 1% of total volume in 2029.
- Assume 100% wood use unless feedstock mix is specified.
- If a project does not announce a startup date, then Forisk estimates the start date.
